Premium Hardware Behind Everyday Fashion

jinglobal.co

About us

Our Story

Our story begins in Guangzhou, China, where **Jinghui Hardware** has been crafting high-quality hardware for over 20 years. What started as a family-owned workshop has grown into a foundation of reliability, skill, and dedication.

In 2025, we took a bold step toward the global stage. We established **Jin Global** in **Rotterdam, the Netherlands**, to better serve clients worldwide. This allows us to bridge our manufacturing excellence with global business needs, providing seamless support and solutions across borders.

What We Offer

Metal hardware remains at the center of our work. **Charms & Straps for Bags & Phones** are natural extensions of our core capabilities.

Leveraging our reliable supply chain and international experience, we deliver solutions that unlock your products' full potential.

Design | Custom Project | OEM | ODM

Raw Materials

ZAMAK (ZINC ALLOY) IS ECO-FRIENDLY & 100% RECYCLABLE.

Surface Finishes

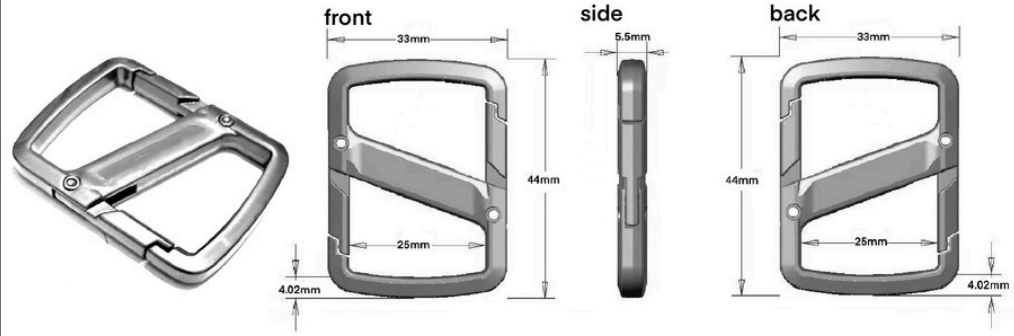

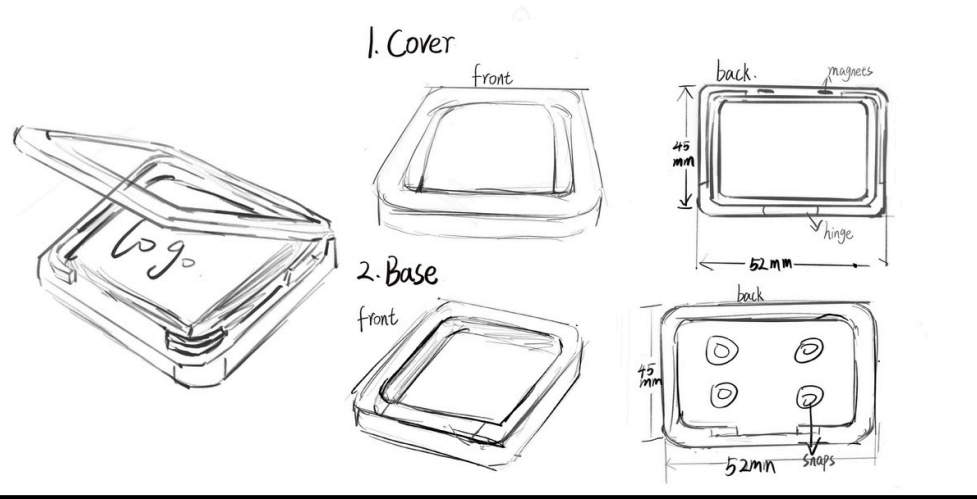

MULTIPLE OPTIONS TO PREVENT CORROSION & IMPROVE AESTHETICS

Quality Control

TESTS TO ENSURE COMPLIANCE WITH REGULATIONS SUCH AS REACH AND ROHS

Staff Care

WE ARE COMMITTED TO A SAFE AND FAIR WORKPLACE, WITH ONGOING IMPROVEMENTS IN EMPLOYEE WELL-BEING.

Research & Development

✓ Reach Compliance

Our R&D covers two parallel directions:

Upgrading existing hardware & Developing new solutions through in-house and collaborative design efforts.

Both are grounded in manufacturing feasibility and long-term production stability.

Improving What Exists.
Creating What Comes Next

From Experience to Innovation

Building on decades of manufacturing experience, our research focuses on understanding key variables that affect quality, appearance, and performance.

We refine processes, raise quality standards, and validate improvements before scale.

At the same time, we actively participate in product development – translating validated insights and market needs into manufacturable, reliable metal components for bags, pet products, apparel, etc.

Sustainability & Responsibility

At Jin Global, sustainability is not a separate initiative or a marketing statement.

It is built into materials, processes, and decisions. It is a result of how we design, manufacture, and control our hardware products over time.

Materials

Our core products are based on Zamak zinc alloy, selected for its balance of strength, precision, and recyclability.

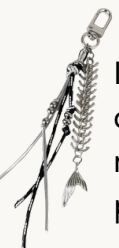

- ✓ 95% less energy to recycle than primary production.
- ✓ Low-temperature casting (385°C) = Massive carbon reduction in Scope 3.
- ✓ 100% infinitely recyclable.

Environment

Significant focus has been placed on minimizing environmental impact by implementing a water purification system and high-efficiency suction systems. These upgrades ensure low emissions while maintaining a safe, healthy environment for our workforce.

People

Our production team is built on long-term technical experience rather than short-term labor rotation. Most of our employees have been with us since the beginning of our journey. We give great importance to safety and health in the workplace.

BUCKLES

2304

Material: Zamak 3/5 Zinc Alloy
Surface Finish: Rack Plating, Nickel

2723
Material: Zamak 3/5 Zinc Alloy
Surface Finish: Rack Plating, Satin Nickel

2500

Material: Zamak 3/5 Zinc Alloy
Surface Finish: E-Coating, Black

- Sizes:**
- 10mm (3/8")
 - 13mm (1/2")
 - 20mm (3/4")
 - 25mm (1")
 - 32mm (1¼")
 - 38mm (1½")
 - 50mm (2")

2503
Material: Zamak 3/5
Surface Finish: Rack Plating, Gold

BUCKLES

1610

Material: Zamak 3/5 Zinc Alloy

Surface Finish: Rack Plating, Gunmetal

2640

Material: Zamak 3/5 Zinc Alloy

Surface Finish: Rack Plating, Satin Nickel

2721

Material: Zamak 3/5 Zinc Alloy

Surface Finish: E-Coating, Black

- Sizes:**
- 10mm (3/8")
 - 13mm (1/2")
 - 20mm (3/4")
 - 25mm (1")
 - 32mm (1¼")
 - 38mm (1½")
 - 50mm (2")

STRAPS & ACCESSORIES

SURFACE FINISHES

Electroplating(galvanic treatments): An electrochemical process that uses direct current to deposit a thin layer of metal onto a conductive substrate, enhancing properties like corrosion resistance, wear resistance, electrical conductivity, and aesthetics.

Colors: Nickel; Chrome; Silver; Gold; Copper; Gunmetal; Tin; Nickel-Free;

Texture: Satin; Brushed; Antique;

Gloss Level: Glossy(Default); Matt;

Physical Vapor Deposition (PVD): A versatile vacuum coating process used to produce thin films by transitioning solid material into a vapor phase and condensing it onto a substrate.

Colors: Nickel ; Black Nickel; Chrome; Silver; Gold; Copper; Gunmetal; Tin; Nickel-Free;

Texture: Satin; Brushed; Antique;

Gloss Level: Glossy(Default); Matt;

Baking paint (baked enamel): A surface treatment process that solidifies paint through high-temperature baking. The core steps include spraying paint and baking in a high-temperature oven (usually 60 ° C~200 ° C), allowing the paint film to quickly harden and form a durable and smooth surface.

Colors: Black; White; Beige; etc.;

Gloss Level: Glossy(Default); Matt;

E-Coating (electrophoretic painting): A high-tech process in which metal components are covered in a protective finish by submersing them in a chemical bath and applying an electrical current.

Colors: Black; ●

Gloss Level: Glossy(Default); Matt;
